1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 4-10 and 12-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Danko (US 5,659,290) in view of Kodate (US 5,748,266).

It is noted that the Danko reference was published on August 19, 1997, which is more than a year prior to May 16, 1999, which is the 119(e) priority date of provisional application 60/135,956. Therefore the Danko reference qualifies as a publication under 35 U.S.C. 102(b).

Figure 4 of the reference shows a system similar to that claimed, but with a CRT (111) rather than a liquid crystal display to feed the output of the processor (109) to a spatial light modulator (50) to form the Fourier mask. It would have been obvious to replace the CRT with other known image forming and projecting means, such as the claimed liquid crystal display. Liquid crystal displays are well known in the art; the instant specification, for example, treats the liquid crystal display (61 in figure 1) as known, requiring no more disclosure than a simple reference as a liquid crystal display; see page 12, line 10 and page 13, lines 13, 14, and 16, and gives no

details as to structure or operation. Additionally, as mentioned by Kodate, there are art recognized advantages of liquid crystal displays over CRTs, such as being smaller (column 1, lines 17-21) and using less power (column 1, lines 23-24); Kodate also notes that a liquid crystal display "provides a display quality equal to that of the CRT". Thus, for the art recognized advantages of using a liquid crystal display instead of a CRT while providing equal display quality, it would have been obvious to use a liquid crystal display instead of the CRT of the Danko reference.
